Requirements

Feature	Phase	Task	Description	Technologies
Accounts	2	Create Account	Allow users to create accounts, and specify whether they are a customer or employee, allowing different permissions	Javascript
Accounts	3	Update Account	Allow the user to update account information or delete the account	Javascript
Menu	1	Add items to the menu	Allow employees to add items to the menu	Javascript, HTML
Menu	1	Remove items from the menu	Allow employees to remove items from the menu	Javascript, HTML
Menu	1	Add deals to the menu	Allow for deals to be shown on specific menu items	Javascript, HTML
Cart	1	Add items to cart	Allow customers to add items to their individual cart	Javascript, HTML
Cart	1	Remove items from cart	Allow customers to remove items from their individual cart	Javascript, HTML
Orders	1	Place order	Allow customers to place an order with the items in their cart	Javascript, HTML
Orders	2	Track order	Allow customers to track the status of their order	Javascript
Orders	1	Search for Order	Allow employees to search orders by ID	Javascript
Orders	3	Update Order	Allow employees to change the status of orders	Javascript
Inventory	1	Track Inventory	Allow employees to view what is currently in the inventory of the restaurant	HTML

Sequence diagram

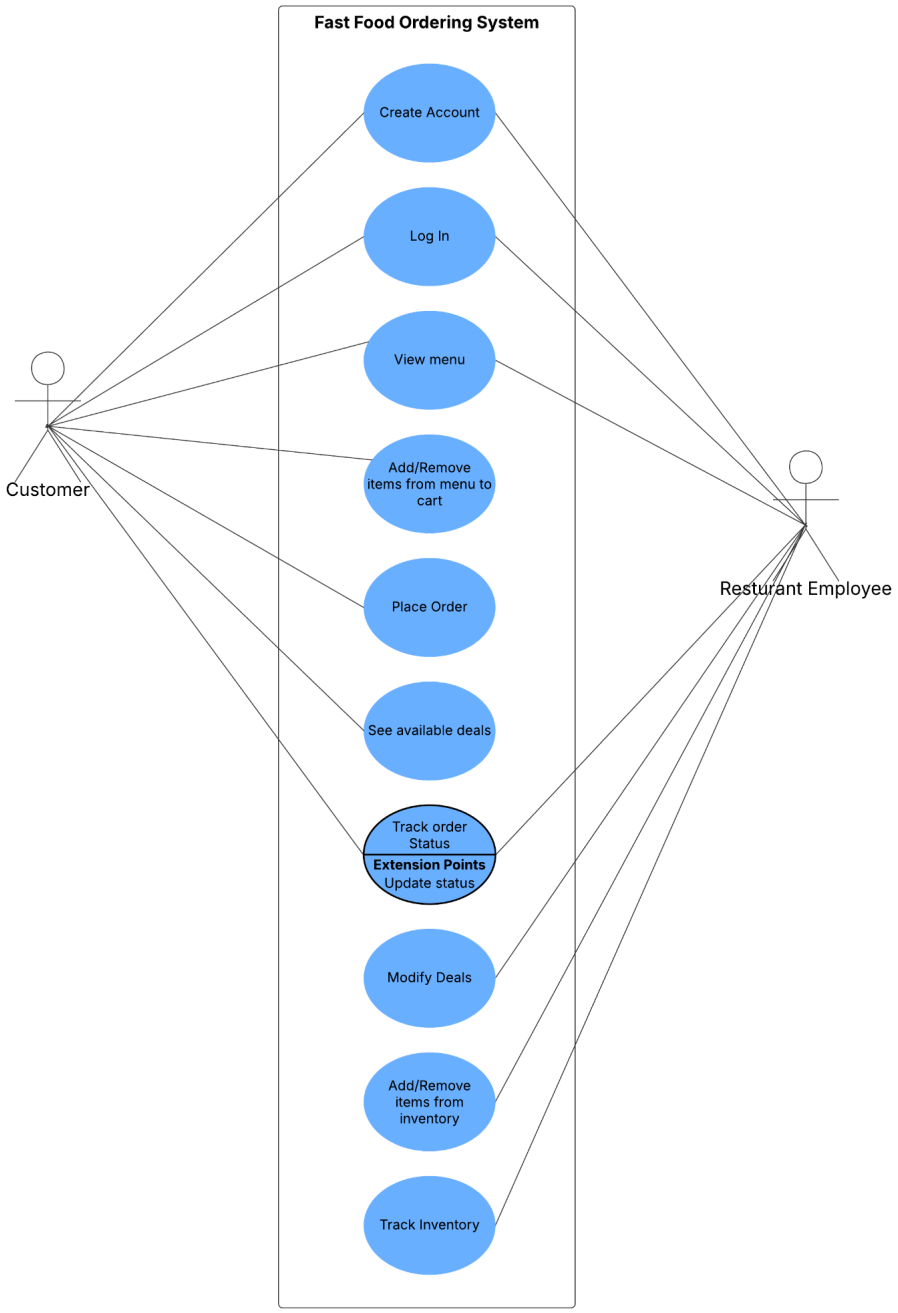
Use case diagram



User Manual

Open the homepage of the website.

Use the navigation bar to access Menu, Rewards, Orders, or Login.

To log in, enter username and password on the login page.

After successful login, users are redirected to the dashboard.

Employees can access inventory management tools.

Customers can browse menu items and place orders.

Use navigation buttons to move between pages.

Compile & Run Instructions

1. Open project folder in Visual Studio Code
2. Install Live Server extension
3. Right click home.html
4. Click Open with Live Server
5. Navigate through pages using navbar

Test Cases

Functionality/ Method	Input	Output	Pass/Fail
Login validation	Username is blank and password is blank	“Please fill in all fields.”	Pass
Login authentication	Username = employee, Password = 1234	User is redirected to the employee dashboard	Pass
Login authentication	Username = wronguser, Password =	“Invalid login.”	Pass

	wrongpass		
Order Placement	Add in Stock item to cart and click Purchase	Purchase confirmation should appear with an order number	Pass
Inventory Management	Change quantity of an item and click Update	New quantity is saved and displayed	Pass
Cart Quantity Update	Click add to cart on a menu item and change the cart item quantity to a different amount	Item should appear in the cart with quantity and price, and these should price update after quantity change	Pass
Order Search	Enter a valid existing order ID	Names of items in order displayed	Fail (should also output number of items in order)
Order Search	Enter a non-existent order ID	“No order found for ID: <input>”	Pass
Order Search	Enter a string, ex: “hello world”	“No order found for ID: “hello world””	Fail (should warn user to enter a number not a string)

Reflection

A brief reflection on what has been accomplished, what went well and could be improved.

Accomplished:

During this phase, our team continued building the core features of the Quadrant One Food Ordering System and improved the parts that were already completed. The CSS styling and HTML structures are just around where we want them to be, but we will still

continue to work on these as well to ensure everything looks great, while still staying completely functional. We also completed the slides for our presentation.

Went Well:

Our team communication remained strong throughout this deliverable. Everyone stayed involved and completed their assigned tasks on time. Testing had helped us catch smaller issues before submission and helped us fix anything that was not implemented properly. We were able to divide the work evenly, which ensured not one person was too overwhelmed and we all tried to help each other if any issues arose.

Needs Improvement:

What could have definitely been improved was managing our time better with deadlines outside of our own project work. We turned in our code inspection for another group later than we should have, which showed that we need to stay a bit more on track for things outside of just our own project. This had caused us to not receive our own code inspection from another group back in time which is definitely an issue and a mistake on our part.

Code Inspection Feedback

(not received)
